March 15, 2008 - BEGA/US introduces its newest recessed floodlights with adjustable light distribution and metal halide lamps. The angle of the reflectors can be tilted and rotated to easily adjust to the desired illumination. This product is ideal for applications where surface-mounted floodlights are not appropriate. Multiple distributions and color effect filters are available to provide design flexibility for a host of lighting tasks. The reflector system can be locked in place to avoid repeated adjustment after relamping.

A simple mounting system allows for easy and economical installation in enclosed or hollow structures.

Available in five standard BEGA colors. Custom colors supplied on special order. UL listed, suitable for wet locations and for installation within 3 feet of ground. Suitable for all types of non IC construction, including poured concrete. Protection class: IP 65.
