(April 2007 – Carpinteria, CA) -- BEGA/US is pleased to introduce the Linear Post Bollard, 8645MH.

The 8645MH isn't just another elegant design, it is an ideally scaled companion for the immensely popular Linear Element Luminaire 8945MH. The product's design is a perfect balance of form and function. 39W T4 G8.5MH lamping delivers excellent, reliable illumination that is both powerful and pleasing to the eye. These heavy duty bollards/marker luminaires provide four-way distribution for illumination and delineation of outdoor spaces such as pathways, pedestrian squares, and building entrances from a low mounting height. Additionally, the 8645MH is constructed using a one-piece die-cast aluminum lamp housing with clear, molded, 3/4" thick tempered glass extending below the lamp housing to increase light spread. The lamp housing is secured with two stainless steel, captive fasteners. The 8645 is fully gasketed using a one piece, molded, high temperature silicone gasket providing weather tight operation. The reflector is made from pure, anodized aluminum. Available in BEGA Standard Finishes: Black, White, Bronze, Silver and Eurocoat™. U.L. listed, suitable for wet locations. Protection class IP65. Further product information is available at: http://www.bega-us.com/product_new.html.
